

RADAR[®]

in the Recording Studio

With the dizzying array of computer GUIs taking over sightlines in the control room, it can be challenging to listen with your ears instead of with your eyes. But with RADAR in the studio, you can turn off the optional VGA monitor, hit RECORD on the Session Controller and let the music flow.

RADAR's all about taking technology out of your way so that you can be creative and spontaneous. Use RADAR and its Session Controller with Meterbridge for amazing sound and a refreshingly simple approach to studio workflow. Here's how:

- **INTEGRATING RADAR WITH YOUR STUDIO** is fast and easy. Patch RADAR alongside an analogue or digital mixing console for optimum control, or use it as the front-end of an audio workstation.
- **MIXING with RADAR** can tie mixes to the multi-track. Do a stereo mix-down of tracks played out of RADAR, sending the mix back into RADAR for simultaneous recording. Plus, using RADAR as the mix destination preserves the audio's fidelity straight through to the end.
- **EDITING with RADAR.** Editing doesn't have to happen on a computer screen. RADAR's dedicated Session Controller can scrub audio with a jog wheel instead of a mouse, add locates and markers on the fly, cut and paste audio regions, and run user-programmable macros – all with 99 levels of undo.
- **FILE MANAGEMENT with RADAR** isn't based on the mouse. Use file naming presets to automatically name all tracks, takes, punches, crossfades and files. Single-button operations name projects and tracks and also create project clones.
- **FILE TRANSFERS with RADAR.**
 - RADAR's native BWAU files will take audio anywhere. Pull one of the removable hard drives and plug it into a workstation's external drive carrier. Or just copy/transfer files using DVD-R, CDR, Blu-ray, a network, or an external drive (e-SATA, Firewire, USB, SCSI).
 - Play audio real-time out of RADAR and into your DAW interface using TDIF, AES, ADAT, SPDIF, or MADI.

Visit the iZ Technology website for more information about RADAR systems & accessories.
