For Immediate Release

iZ Technology Announces 3.38 RADAR® Software

Vancouver, BC (October 12, 2006) iZ Technology has announced the release of the anticipated 3.38 software for its RADAR® Hard Disk Recording systems. With 18 new features and over 140 improvements, 3.38 RADAR® software is a key upgrade for RADAR® users working in music studios, live performance or post-production.

“3.38 RADAR® software was designed to meet the real-world needs of audio professionals,” says iZ Technology Support Manager N.J. McDonnell. “With streamlined FTP file transfers, 23.976 Frame Rate support for HD Video, 48 Hz PAL Sync Mode, and one-step backup to DVD-R/CD-R, this software allows for faster, more seamless integration with DAWs and other audio set-ups both inside and outside the traditional audio production studio.”

Fully compatible with the 23.976 Frame Rate standard for HD video, RADAR® recorded audio stays in solid sync with HD video, allowing for broad-reaching applications for post and live RADAR® users. Audio recorded on RADAR® can be perfectly synced to an HD video source for smooth production of movies, music videos, and Live Concert DVDs. 24 Frame HD Film Projects will benefit from the 48 Hz PAL Sync Mode option, which runs at 48Hz through the entire post-production project.

3.38 RADAR® software simplifies the FTP file transfer process by enabling transfers directly from the Session Controller. Bypass time-consuming computer-based FTP access by exporting, importing, backing-up, and restoring from RADAR® to a network drive. Users across all applications will reap the benefits of faster-than-real-time transfer rates when they combine 3.38 RADAR software with a RADAR® V system or a Gigabit Ethernet upgrade.

Streamline the creative process by eliminating process steps; 3.38 RADAR® software allows users to retain track names across multiple projects. It also offers one-step backup to DVD-R/CD-R for short-term archiving.

The 3.38 RADAR® software upgrade is available for free download to current 3.3x users. Upgrade from 3.2x RADAR® software for \$149.00 USD. For all upgrades, contact an authorized iZ dealer, or contact iZ directly via the website or toll-free phone.

About RADAR®

RADAR® systems are the premier choice for multi-track recording and playback in some of the finest recording studios, scoring stages, theatres, and post production houses around the world. With a commitment to unparalleled sound, rock solid reliability, and invisibility to the creative flow, RADAR® transcends the traditional barriers of performance and sonic quality.
