

How to use a RADAR WinImage file from iZ Technologies

Equipment needed:

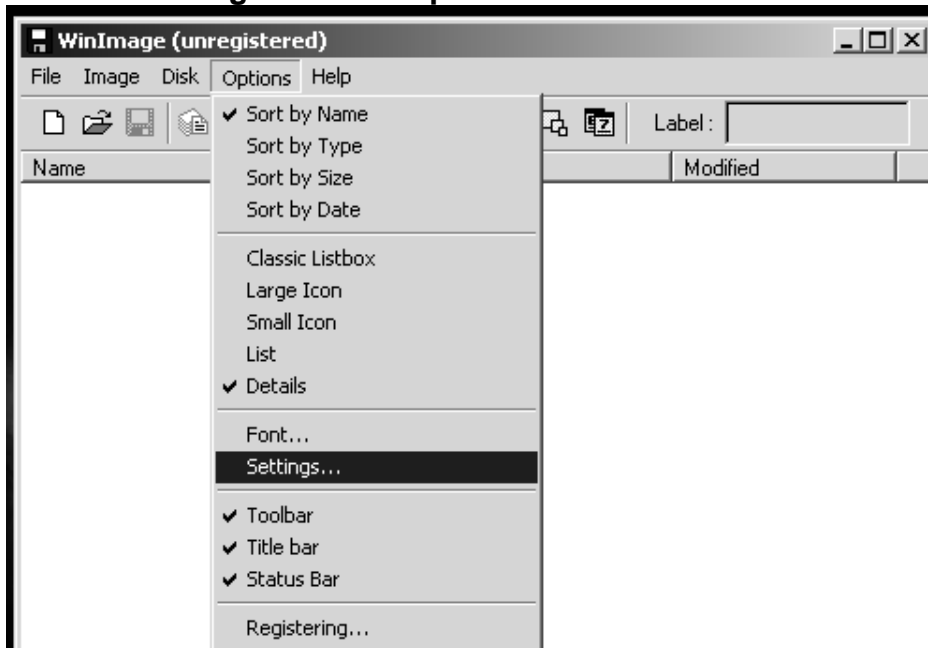

1. PC with a 3.5" floppy drive
2. WinImage software

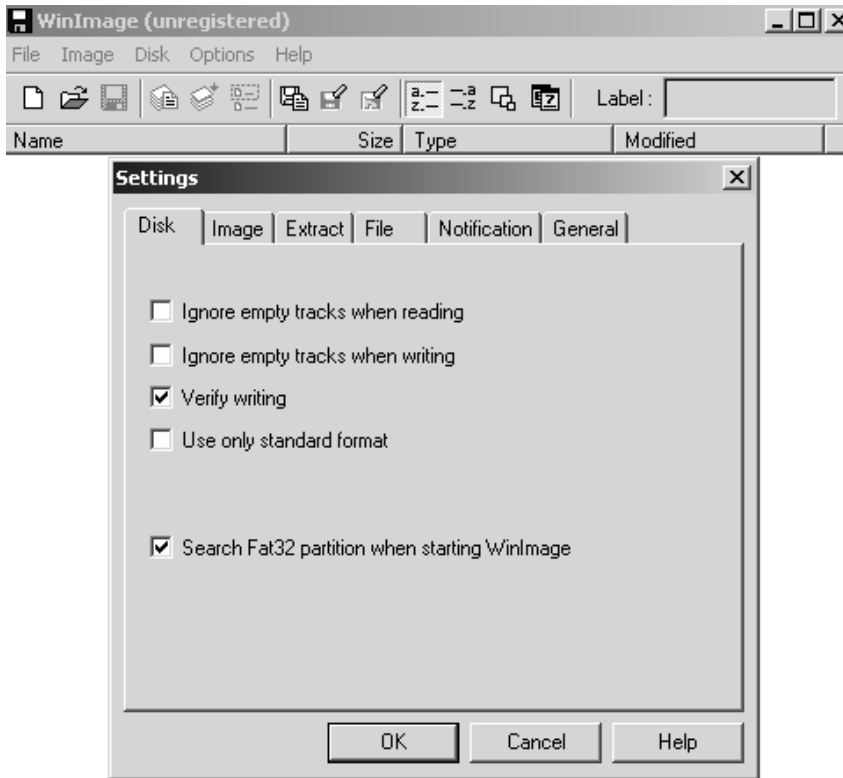

3. RADAR WinImage file such as Rii254.imz
4. Blank 3.5" double sided high density floppy diskette

Procedure:

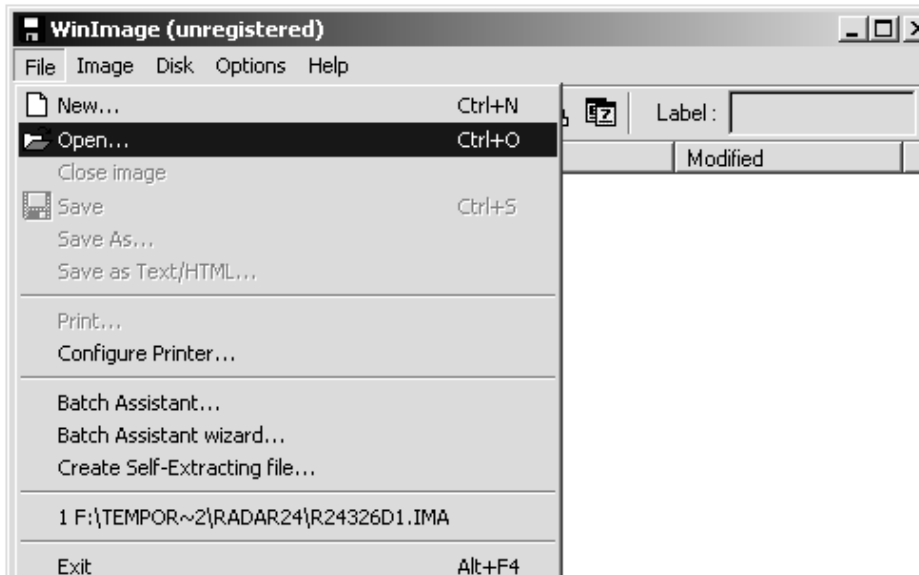

1. Move the write-protect label to the closed position on the floppy diskette
2. Insert the floppy diskette in the floppy drive
3. Start WinImage
4. Select **Settings...** on the **Options** menu

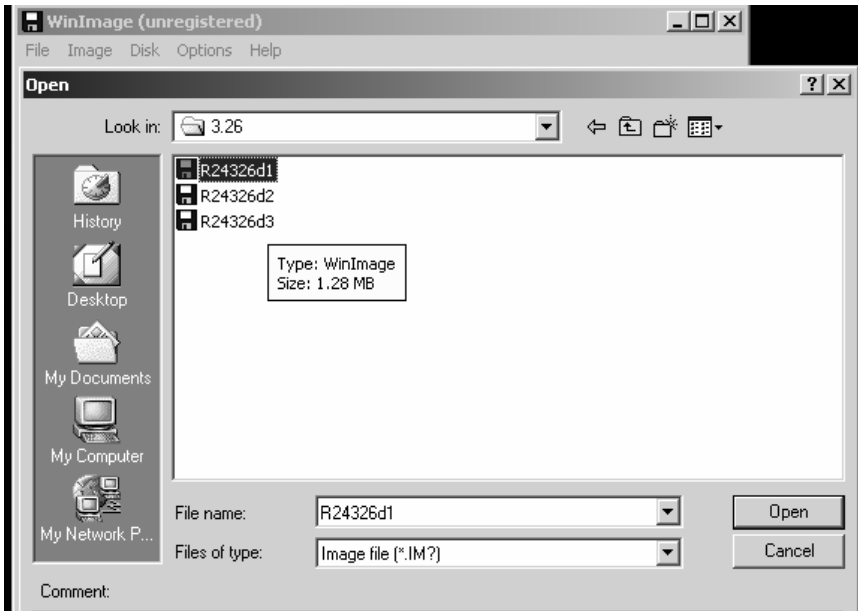

5. Ensure that **Verify writing** is checked and click **OK**

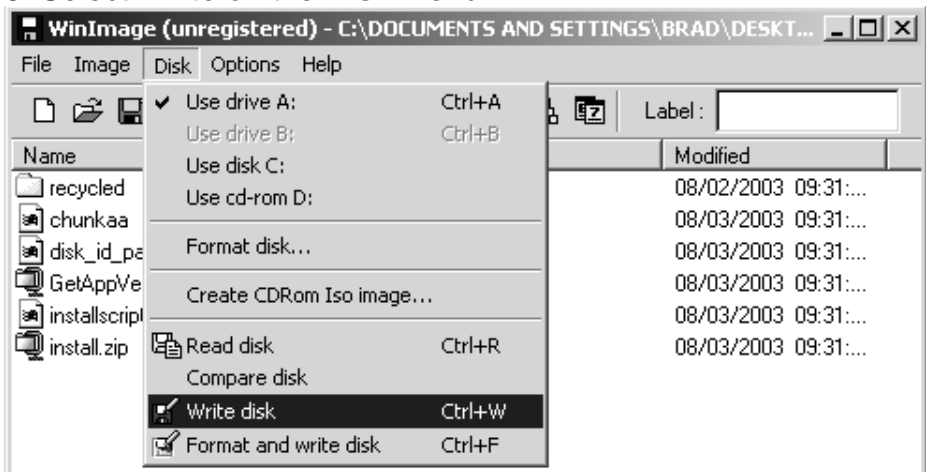

6. Select **Open** on the **File** menu

7. Choose the RADAR WinImage file such as Rii254.imz and click **Open**

8. Select Write on the Disk menu

9. When the Writing disk progress bar has completed and the floppy drive light has gone out, then the floppy is ready for use
