

# UFC24 FIRMWARE UPGRADE

## WHY UPGRADE?

Two UFC-24's that are having problems linking together.

- 1 Determine which version of firmware is on each unit. To do this press and hold the output button.
- 2 The last four buttons on the very right (labeled 21-24) indicate the current version. The display is in binary. If they're different an upgrade is required. Contact iZ Tech Support 1-800-776-1356 to order an upgrade chip(s).

- 3 The chip to replace is the only socketed chip on the circuit board.
- 4 Remove this chip using the provided chip puller.
- 5 Install the new chip, place chip on socket, align slanted corner of the chip with slanted corner of the socket, press firmly and evenly on 2 sides of chip to insert it in the socket.
- 6 Repeat step 1 to confirm the chip was installed correctly.
